## Typical Product Specifications & Properties

# 2-Methyltetrahydrofuran

CAS Number: : 96-47-9

| Specifications      | Limits                                                                                                                                                                            |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Molecular weight    | 86.13                                                                                                                                                                             |
| EINECS              | 202-507-4                                                                                                                                                                         |
| InChI               | 1S/C5H10O/c1-5-3-2-4-6-5/h5H,2-4H2,1H3                                                                                                                                            |
| InChIKey            | JWUJQDFVADABEY-UHFFFAOYSA-N                                                                                                                                                       |
| Boiling Point       | 78-80 &deg;C                                                                                                                                                                      |
| Storage Temperature | Flammables area                                                                                                                                                                   |
| Melting Point       | -136 &deg;C                                                                                                                                                                       |
| Stability           | Stable, but highly flammable. Incompatible with oxidizing agents, strong acids, strong bases. May form explosive peroxides in storage, so often supplied with an inhibitor added. |
| Density             | 0.86 g/mL at 25 &deg;C                                                                                                                                                            |
| Freezing Point      | -136?                                                                                                                                                                             |
| Refractive Index    | 1.406                                                                                                                                                                             |
| Water solubility    | 15 g/100 mL (25 C)                                                                                                                                                                |
