## Typical Product Specifications & Properties

# 4-Cumylphenol

CAS Number: : 599-64-4

| Specifications   | Limits                                                                                    |
|------------------|-------------------------------------------------------------------------------------------|
| Molecular weight | 212.29                                                                                    |
| EINECS           | 209-968-0                                                                                 |
| SMILES           | <chem>CC(C)(c1ccccc1)c2ccc(O)cc2</chem>                                                   |
| InChI            | 1S/C15H16O/c1-15(2,12-6-4-3-5-7-12)13-8-10-14(16)11-9-13/h3-11,16H,1-2H3                  |
| InChIKey         | QBDSZLJBMIMQRS-UHFFFAOYSA-N                                                               |
| Boiling Point    | 335 &deg;C                                                                                |
| Stability        | Stable. Incompatible with oxidizing agents, acid chlorides, acid anhydrides. Combustible. |
| Flash Point      | 160 &deg;C                                                                                |
| Density          | 1,115 g/cm3                                                                               |
| Melting Point    | 72-75 &deg;C                                                                              |
| BRN Number       | 1870517                                                                                   |
