Typical Product Specifications & Properties

Saquinavir Mesylate

CAS Number: : 149845-06-7

Specifications	Limits
Molecular weight	670.841
Assay/Purity	Typically NLT 98%
Chemical Structure	 The chemical structure of Saquinavir Mesylate is shown. It consists of the Saquinavir molecule, which is a peptidomimetic HIV protease inhibitor, paired with a mesylate (methanesulfonate) counterion. The Saquinavir molecule features a complex polycyclic core with various functional groups including amides, alcohols, and a quaternary ammonium salt. The mesylate group is represented as a sulfur atom double-bonded to one oxygen and single-bonded to two others, one of which is a negative charge.
