## Typical Product Specifications & Properties

# Sodium Oleate

CAS Number: : 143-19-1

| Specifications     | Limits                                                                              |
|--------------------|-------------------------------------------------------------------------------------|
| Appearance         | White powder                                                                        |
| Moisture           | Max 6%                                                                              |
| Mol Wt.            | 304                                                                                 |
| C18:1              | Min 70%                                                                             |
| Odor               | wh. powd., sl. tallow-like odor                                                     |
| Melting Point      | 232-235 c                                                                           |
| HLB                | 18.0                                                                                |
| Molecular weight   | 304.50                                                                              |
| Solubility         | 10 parts water, 20 parts alcohol                                                    |
