## Typical Product Specifications & Properties

# 1 -Naphthaldehyde

CAS Number: : 67-56-1

| Specifications                 | Limits                                      |
|--------------------------------|---------------------------------------------|
| Density                        | 0.7924                                      |
| Surface Tension                | 22.3 dynescm                                |
| Dielectric Constant            | 32.66                                       |
| Auto/Self Ignition Temperature | temp. 385 c                                 |
| Odor                           | alcoholic odor (pure), pungent odor (crude) |
| Melting Point                  | -97.8 c                                     |
| Vapor Pressure                 | 127 mm hg                                   |
| Refractive Index               | 1.3292 (20 c)                               |
| Molecular weight               | 32.05                                       |
| Color                          | clear colorless liquid                      |
| Flash Point                    | cc) 6 c                                     |
| Boiling Point                  | 64.5 c                                      |
