## Typical Product Specifications & Properties

# 3,3,4,4,5,5,6,6,7,7,8,8,8-Tridecafluorooctan-1-ol

CAS Number: : 647-42-7

| Specifications   | Limits                                                        |
|------------------|---------------------------------------------------------------|
| Molecular weight | 364.10                                                        |
| EINECS           | 211-477-1                                                     |
| Boiling Point    | 88-95 &deg;C/28 mm Hg                                         |
| Flash Point      | 197 &deg;F                                                    |
| RTECS            | RH1460000                                                     |
| BRN Number       | 1992757                                                       |
| Refractive Index | 1.313                                                         |
| Water solubility | Miscible with chloroform and methanol. Immiscible with water. |
| Density          | 1.651 g/mL at 25 &deg;C                                       |
