## Typical Product Specifications & Properties

# Di-n-hexyl phthalate

CAS Number: : 84-75-3

| Specifications   | Limits                                                                                                              |
|------------------|---------------------------------------------------------------------------------------------------------------------|
| Molecular weight | 334.45                                                                                                              |
| EINECS           | 201-559-5                                                                                                           |
| InChI            | 1S/C20H30O4/c1-3-5-7-11-15-23-19(21)17-13-9-10-14-18(17)20(22)24-16-12-8-6-4-2/h9-10,13-14H,3-8,11-12,15-16H2,1-2H3 |
| InChIKey         | KCXZNSGUUQJJTR-UHFFFAOYSA-N                                                                                         |
| Density          | 1,01 g/cm3                                                                                                          |
| Melting Point    | 65?                                                                                                                 |
| Boiling Point    | 185-187&deg;C 0,5mm                                                                                                 |
| Water solubility | Soluble in water (0.24 mg/L).                                                                                       |
| Flash Point      | 185-187&deg;C/0.5mm                                                                                                 |
