## Typical Product Specifications & Properties

# Farnesol

CAS Number: : 4602-84-0

| Specifications      | Limits                                                                                           |
|---------------------|--------------------------------------------------------------------------------------------------|
| Molecular weight    | 222.37                                                                                           |
| EINECS              | 225-004-1                                                                                        |
| InChI               | 1S/C15H26O/c1-13(2)7-5-8-14(3)9-6-10-15(4)11-12-16/h7,9,11,16H,5-6,8,10,12H2,1-4H3/b14-9+,15-11+ |
| InChIKey            | CRDAMVZIKSXXKFV-YFVJMJOTDSA-N                                                                    |
| Refractive Index    | 1.490                                                                                            |
| Water solubility    | Not miscible or difficult to mix in water.                                                       |
| Storage Temperature | -20&deg;C                                                                                        |
| BRN Number          | 1763926                                                                                          |
| Stability           | Stable. Combustible. Incompatible with strong oxidizing agents.                                  |
| Boiling Point       | 149 &deg;C4 mm Hg                                                                                |
| FEMA                | 2478                                                                                             |
| Sensitive           | Light Sensitive                                                                                  |

| Specifications               | Limits                                 |
|------------------------------|----------------------------------------|
| Density                      | 0.886 g/mL at 20 &deg;C                |
| Merck                        | 14,3937                                |
| Flash Point                  | 205 &deg;F                             |
| Storage Temperature          | -20&deg;C                              |
| Atmospheric OH Rate Constant | 2.69E-10 cm <sup>3</sup> /molecule-sec |
| log P (octanol-water)        | 5.770                                  |
| Melting Point                | < 25 &deg; C                           |
| Storage Temperature          | -20&deg;C                              |
