## Typical Product Specifications & Properties

# N-(1-Naphthyl)thiourea

CAS Number: : 86-88-4

| Specifications      | Limits                                                                  |
|---------------------|-------------------------------------------------------------------------|
| Molecular weight    | 202.28                                                                  |
| EINECS              | 201-706-3                                                               |
| InChI               | 1S/C11H10N2S/c12-11(14)13-10-7-3-5-8-4-1-2-6-9(8)10/h1-7H,(H3,12,13,14) |
| InChIKey            | PIVQQUNOTICCSA-UHFFFAOYSA-N                                             |
| Melting Point       | 193 &deg;C                                                              |
| Merck               | 14,722                                                                  |
| Storage Temperature | Poison room                                                             |
| BRN Number          | 778118                                                                  |
| Density             | 1.333                                                                   |
