Typical Product Specifications & Properties

2-(4-morpholin-4-ylphenyl)acetic Acid

CAS Number: : 1235011-96-7

| Specifications | Limits |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Chemical Structure |  The chemical structure shows a morpholine ring (a six-membered ring with one oxygen and one nitrogen atom) attached to a phenyl ring (a six-membered carbon ring). The phenyl ring is further substituted with an acetic acid group (-CH2COOH) at the para position relative to the morpholine group. The structure is drawn with stereochemistry indicating a specific enantiomer. |
