

2-amino-N,N'-
dibenzylpropanediamide;hydrochl

Specifications	Limits
Chemical Structure	 <p>The image displays the chemical structure of Oxycodone, a semi-synthetic opioid. It features a pentacyclic core consisting of a morphine-like skeleton with a ketone group at the 3-position and a double bond between C4 and C5. The structure is shown with stereochemistry: a hydroxyl group at C6, a methyl group at C13, and a nitrogen atom at C17. A large, faint watermark for 'parchem fine & specialty chemicals' is visible in the background.</p>
