## Typical Product Specifications & Properties

# 4-(2-Bromo-4-fluorobenzyl)morpholine

CAS Number: : 1086600-40-9

| Specifications      | Limits                                                                                                   |
|---------------------|----------------------------------------------------------------------------------------------------------|
| Molecular weight    | 274.13                                                                                                   |
| Molecular weight    | 187.86                                                                                                   |
| EINECS              | 203-444-5                                                                                                |
| SMILES              | C(CBr)Br                                                                                                 |
| InChI               | 1S/C2H4Br2/c3-1-2-4/h1-2H2                                                                               |
| InChIKey            | PAAZPARNPHGIKF-UHFFFAOYSA-N                                                                              |
| Vapor Density       | ~6.5                                                                                                     |
| Vapor Pressure      | 11.7 mm Hg ( 25 &deg;C)                                                                                  |
| Storage Temperature | 0-6&deg;C                                                                                                |
| Refractive Index    | 1.539                                                                                                    |
| Stability           | Stable, but may be light sensitive. Incompatible with strong oxidizing agents, magnesium, alkali metals. |
| Melting Point       | 9 &deg;C                                                                                                 |

| Specifications   | Limits                 |
|------------------|------------------------|
| Flash Point      | 132&deg;C              |
| Boiling Point    | 131-132 &deg;C         |
| Merck            | 14,3796                |
| Water solubility | 4 g/L (20 °C)          |
| Density          | 2.18 g/mL at 25 &deg;C |
