## Typical Product Specifications & Properties

# 4-Chlorobenzyl Alcohol

CAS Number: : 873-76-7

| Specifications   | Limits                                                                                           |
|------------------|--------------------------------------------------------------------------------------------------|
| Molecular weight | 142.58                                                                                           |
| EINECS           | 212-852-2                                                                                        |
| SMILES           | <chem>OCc1ccc(Cl)cc1</chem>                                                                      |
| InChI            | 1S/C7H7ClO/c8-7-3-1-6(5-9)2-4-7/h1-4,9H,5H2                                                      |
| InChIKey         | PTHGDVCPCKZKR-UHFFFAOYSA-N                                                                       |
| Melting Point    | 68-71 °deg;C                                                                                     |
| Boiling Point    | 234 °deg;C                                                                                       |
| BRN Number       | 636502                                                                                           |
| Flash Point      | 70 °deg;C                                                                                        |
| Stability        | Stable. Incompatible with acid chlorides, acid anhydrides, acids, oxidizing agents. Combustible. |
