Typical Product Specifications & Properties

5-Cyclopropyl-2-fluoroaniline

CAS Number: : 1784677-83-3

| Specifications | Limits |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Chemical Structure |  The chemical structure shows a benzene ring with a fluorine atom at the 2-position and a cyclopropyl group at the 5-position. The cyclopropyl group is attached to the benzene ring via a carbon atom, which is also bonded to two other carbon atoms in a three-membered ring. The benzene ring has a fluorine atom at the 2-position and a hydrogen atom at the 1-position. The cyclopropyl group has three carbon atoms, each bonded to two hydrogen atoms. |
