**6-Fluoro-1-methyl-4-oxo-7-(piperidin-1-yl)-1,4-dihydroquinoline-3-carboxylic acid**

Specifications	Limits
Chemical Structure	 <p>The chemical structure of Naloxone is shown, a morphine antagonist. It features a morphine-like skeleton with a hydroxyl group at C3, a ketone at C17, and a 4,5-epoxide. The nitrogen at C4 is substituted with a propyl group. The structure is overlaid with a large, faint 'parchem' watermark and the text 'fine &amp; specialty chemicals'.</p>

415 Huguenot Street, New Rochelle, New York 10801
