## Typical Product Specifications & Properties

# alpha-Ethyl-o-methoxybenzyl alcohol

CAS Number: : 2027836

| Specifications   | Limits                                                                                                 |
|------------------|--------------------------------------------------------------------------------------------------------|
| Molecular weight | 277.94                                                                                                 |
| EINECS           | 202-783-6                                                                                              |
| Merck            | 14,1427                                                                                                |
| Form             | Crystalline Solid                                                                                      |
| Stability        | Stable. Incompatible with strong bases, strong reducing agents, strong oxidizing agents.               |
| Density          | 1.7855 (rough estimate)                                                                                |
| BRN Number       | 607604                                                                                                 |
| Sensitive        | Lachrymatory                                                                                           |
| Boiling Point    | 1415&deg;C/760mm                                                                                       |
| Water solubility | Soluble in dimethyl sulfoxide (5 mg/ml), methanol (20 mg/ml), toluene and ethanol. Insoluble in water. |
| Refractive Index | 1.5560 (estimate)                                                                                      |
| Color            | Slightly yellow to beige                                                                               |
