Ethyl 4-[(3-chlorobenzyl)amino]quinazoline-2-carboxylate

Specifications	Limits
Chemical Structure	 <p>The chemical structure of Naloxone is shown, a morphine antagonist. It features a pentacyclic morphine skeleton with a 4,5-epoxide bridge, a 3-hydroxyl group, and a 17-methyl group. The structure is overlaid with a large, faint 'parchem' watermark and the text 'fine & specialty chemicals'.</p>

415 Huguenot Street, New Rochelle, New York 10801
