## Typical Product Specifications & Properties

# Ethyl linoleate

CAS Number: : 544-35-4

| Specifications     | Limits                                                                              |
|--------------------|-------------------------------------------------------------------------------------|
| Boiling Point      | 388-389 c                                                                           |
| Density            | 0.882 0.06 gcm3                                                                     |
| Melting Point      | 21-24 c                                                                             |
| Color              | colorless, clear liquid                                                             |
| Insolubility       | in water                                                                            |
| Flash Point        | (tcc) 100 c                                                                         |
| Chemical Structure |  |
| Refractive Index   | 1.465 0.02                                                                          |
| Solubility         | alcohol                                                                             |
| Molecular weight   | 308.5                                                                               |
