

## Typical Product Specifications & Properties

# Fmoc-serinol

CAS Number: : 17332-31-9

Specifications	Limits
Chemical Structure	 <p>The chemical structure of Fmoc-serinol is shown. It consists of a fluorenylmethyloxycarbonyl (Fmoc) group attached to the hydroxyl group of serinol. The serinol part is a 1,2,3-trihydroxypropyl chain. The Fmoc group is a fluorene ring system with a methylene group at the 9-position, which is connected to the oxygen of the serinol's hydroxyl group. The structure is drawn with stereochemistry indicated by wedges and dashes. A watermark for 'parchem fine &amp; specialty chemicals' is visible in the background.</p>
