## Typical Product Specifications & Properties

# Magnesium Hydroxide Slurry

CAS Number: : 1309-42-8

| Specifications        | Limits                                                |
|-----------------------|-------------------------------------------------------|
| Solids                | 60 - 68%                                              |
| Viscosity             | 400 - 800 cps                                         |
| (Ignited Oxide Basis) |                                                       |
| Insolubles            | 3.00                                                  |
| Density               | 12.94 - 13.86 lbs/gal                                 |
| MgO                   | 91.50 min                                             |
| R2O3                  | 1.00                                                  |
| CaO                   | 3.00                                                  |
| Melting Point         | 350 c (dec.)                                          |
| Odor                  | odorless                                              |
| Molecular weight      | 58.33                                                 |
| Color                 | white amorphous powder or colorless hexagonal crystal |
