## Typical Product Specifications & Properties

# N-(2-(3,4-dimethoxyphenyl)ethyl)-3,4-dimethoxycinnamic acid amide

CAS Number: : 69444-90-2

| Specifications     | Limits                                                                              |
|--------------------|-------------------------------------------------------------------------------------|
| Melting Point      | 127.00 to 128.00 °C. @ 760.00 mm Hg                                                 |
| Boiling Point      | 586.00 to 587.00 °C. @ 760.00 mm Hg                                                 |
| Flash Point        | 587.00 °F.TCC                                                                       |
| Appearance         | white solid                                                                         |
| logP (o/w)         | 3.08                                                                                |
| Odor               | savory meat                                                                         |
| Assay              | 99.00 to 100.00 %                                                                   |
