## Typical Product Specifications & Properties

# Oxanilide

CAS Number : 620-81-5

| Specifications               | Limits                                                                                      |
|------------------------------|---------------------------------------------------------------------------------------------|
| Molecular weight             | 240.26                                                                                      |
| EINECS                       | 210-653-5                                                                                   |
| SMILES                       | <chem>O=C(Nc1ccccc1)C(=O)Nc1ccccc1</chem>                                                   |
| InChI                        | 1S/C14H12N2O2/c17-13(15-11-7-3-1-4-8-11)14(18)16-12-9-5-2-6-10-12/h1-10H,(H,15,17)(H,16,18) |
| InChIKey                     | FTWUXYZHDFCGSV-UHFFFAOYSA-N                                                                 |
| BRN Number                   | 1645104                                                                                     |
| Melting Point                | 253-256 &deg;C                                                                              |
| log P (octanol-water)        | 2.080                                                                                       |
| Melting Point                | 254 &deg; C                                                                                 |
| Atmospheric OH Rate Constant | 8.53E-11 cm <sup>3</sup> /molecule-sec                                                      |
