

## Typical Product Specifications & Properties

# Stannous Chloride, Dihydrate

CAS Number: : 10025-69-1

| Specifications             | Limits                                                            |
|----------------------------|-------------------------------------------------------------------|
| Density                    | 2.71                                                              |
| Direct Evaporative Cooling | on strong heating                                                 |
| Very Soluble               | in dil. or conc. hcl                                              |
| Melting Point              | 37-38 c                                                           |
| Molecular weight           | 225.63                                                            |
| Solubility                 | alcohol, ethyl acetate, glac. acetic acid, sodium hydroxide soln. |
| Boiling Point              | 652 c                                                             |
