

Typical Product Specifications & Properties

Aminophosphonate

CAS Number: 9032-10-4

Specifications	Limits
Chemical Structure	 <p>The image shows the chemical structure of aminophosphonate, which consists of a central phosphorus atom (P) bonded to two hydroxyl groups (OH) and one amino group (NH2). The phosphorus atom is also bonded to a negatively charged oxygen atom (O⁻). The structure is presented in a ball-and-stick model with a semi-transparent watermark of the Parchem logo in the background. Below the structure, the Parchem logo is displayed, featuring the word "parchem" in a lowercase, sans-serif font, with the tagline "fine & specialty chemicals" underneath it.</p>
